Handy Drums update v1.4.1

UPDATES- VIRTUAL INSTRUMENTS · https://library.gorangrooves.com/docs/handy-drums-update-v1-4-1/

Monday, April 3rd, 2023

Overview

Handy Drums update v1.4.1 is a maintenance update that fixes several issues previously reported.

- In FL Studio, projects with tempos below 108BPM were crashing- FIXED
- Ableton Live 11 and Cubase: in certain circumstances, when using variable hi-hats, DAW would crash- FIXED
- Logic Pro: popup to locate the sample library every time the plugin is initiated (even though the sample library has been located) no longer comes up
- It is now possible to select all buffer sizes in the standalone mode, even if they are not a multiple of 8. This allows the selection of certain ASIO drivers on Windows that was not previously possible.

How To Update to v1.4.1

We recommend all Handy Drums users update their plugins to v1.4.1. The installer v1.4.1 will update your plugins in VST2, VST3, AU, AAX formats, and standalone apps from v1.4.0.

You will find "v1.4.1 update only" installers for the products you have purchased/ are trying out in your GoranGrooves Library account.

Note: If you are updating from v1.0.3, you will first need to run the update to 1.4.0, then to 1.4.1, or run the full installer v1.4.1.

If you are updating from v1.4.0, you only need to install the update 1.4.1.

For more information on the Handy Drums update procedure, see this document.
